EquiVision™

A clear cataract solution

The solution to equine cataracts is clear.

www.aderent.com

A highly effective and safe solution for equine eye health.

EquiVision[®], a nutraceutical ophthalmic product has been tested and proven to reduce the opacity of cataracts in equine eyes, specifically due to Equine Recurrent Uveitis, and assists in maintaining eye clarity. Historically, cataracts have required an expensive surgical procedure. Now comes a non-invasive alternative requiring only a few drops in the affected eye, a few times a day.

About eye disorders

What is Equine Recurrent Uveitis?

Equine Recurrent Uveitis (ERU) is an immune-mediated disease affecting the anterior ocular segment (iris, ciliary body, cornea and lens), the posterior ocular segment (choroids, retina, optic nerve and vitreous), or both.

ERU, also known as Moon Blindness, can be caused by bacteria, virus, parasites or trauma and is the most common cause for blindness in horses and mules.

Common ocular complications resulting from ERU include:

- Cataract formation
- Glaucoma, and
- Blindness

Do not use any ophthalmic steroid or steroid derivative in combination with EquiVision. Steroids cancel the positive effects of our product, although they carry no risk for equine.

All equine with cataracts should be referred to a veterinarian for evaluation.

EquiVision[®] is sold only through licensed veterinarians.

EquiVision[®]... how does it work?

What is EquiVision[®]?

EquiVision[®] has been developed and formulated by veterinarians, ophthalmologists and scientists to help alleviate:

- Incipient Cataracts
- Immature Cataracts (when a Tapetal reflection is still visible)
- Nuclear Sclerosis
- Dry Eye Syndrome

How EquiVision[®] works

- EquiVision[®] dissolves the glycosylated proteins in the eye lens
- EquiVision[®] adds new proteins in the eye lens to promote and help maintain transparency
- EquiVision[®] provides a high level of lubrication to instantly relieve the dryness, burning and irritation of Dry Eye syndrome

Application of EquiVision[®]

Apply 2-3 drops in the affected eye or eyes, 2-3 times daily, for a minimum of 45 days.

Note: Typically, you will begin to see results after the use of the first package of EquiVision[®]
