

INGREDIENTS:

- **Thyme:** Acts as an antiseptic and is used for bronchitis, asthma, soothing the lungs, air passages and helps with pain.
- **Anise Seed:** Works as an expectorant, helps relieve the common cold, asthma, bronchitis, influenza, pneumonia, and sinusitis.
- **Mistletoe:** Used as an antispasmodic, which helps prevent or relieves convulsions or spasms in seizures. Mistletoe also has been known to stimulate the immune system.
- **Tansy:** Acts as a sedative for nerves and emotional impulses. In cases like anxiety, depression, convulsions, nervous afflictions, impulsive behavior, etc., it can be used to pacify and induce a relaxing effect on the nerves and brain.
- **Vervain:** A nervine which is known to strengthen the nervous system while calming and relaxing the body. This herb also helps depression due to an illness; because of the calming and relaxing effect, it helps settle nervous coughing.
- **American Skullcap:** Acts as a delivery agent into the brain for all the other herbs.
- **Alcohol:** Used to bring out the properties in the herbs and to preserve the tincture.
- **Filtered Water**

*These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

According to a 2008 report from the American Association of Poison Control, NO deaths were reported in the use of herbal products

RECOMMENDED RECIPE TO USE THROUGH PROTOCOL

Below is a beef stew recipe from *Dr. Pitcarne's Complete Guide to Natural Health for Dogs and Cats*. As with any gastro-intestinal disease, first foods should be bland and easy to digest. Start slowly and increase food dose 1 hour at a time.

Beef Stew

1 lb ground beef
 1/2 cup carrots
 1/2 cup green beans
 1/2 cups celery
 1 Tbsp onion

Cook beef and drain off excess fat. Add remaining ingredients and enough water to cover the meat and vegetables.

SUGGESTED USE FOR CANINE DISTEMPAID™

Do Not Exceed The Recommended Dose!

Shake product well before use.

| Weight | Drops | ml/cc | Daily |
|-------------|-------|-------|-------|
| Under 3 lbs | 1 | 0.03 | 2x |
| 3-10 lbs | 3 | 0.09 | 2x |
| 11-25 lbs | 5 | 0.15 | 2x |
| 26-80 lbs | 6 | 0.18 | 2x |
| 81-150 lbs | 8 | 0.24 | 2x |
| 151-251 lbs | 10 | 0.30 | 2x |
| 252-300 lbs | 13 | 0.39 | 2x |

Liquid Chart for colostrum, coco milk, hydration

| Animal Weight | Fluid | Animal Weight | Fluid |
|---------------|--------|---------------|--------|
| Under 3 lbs | 1 Tsp | 21 - 30 lbs | 2 Tbsp |
| 3 - 10 lbs | 2 Tsp | 31 - 40 lbs | 3 Tbsp |
| 11 - 20 lbs | 1 Tbsp | 41 - 51 lbs | 4 Tbsp |

Add 1 Tbsp for every additional 10 lbs.

CAUTION:

Keep out of the reach of children. Do not give Canine Distempaid™ to animals that are pregnant, or have pancreas or liver disease. **Do not give Canine Distempaid™ to cats.** As with any product allergic reactions may occur. Stop giving Canine Distempaid™ if you see any of the following: Rashes, hives, edema (swelling), diarrhea, or blood in stools. If your pet has a reaction, give charcoal and take to a veterinarian. (Have your vet treat for symptoms.) May cause miscarriage in some animals.

CANINE DISTEMPAID™

Organic

***An aid to support neurological symptoms of tremors, hard pads and seizures.**

Canine distemper is a virus, which appears similar to the virus that causes human measles (the canine distemper does not transfer to humans). The virus in your dog can affect a wide range of organs including the nervous system, skin, brain, eyes, intestinal and respiratory tracts. The virus is transmitted through the air in addition to body secretions such as urine. Dogs of any age can be affected; however, most are puppies less than 6 months of age.

ABOUT CANINE DISTEMPER VIRUS

What are the symptoms?- The Canine Distemper Virus (CDV) is inhaled to nearby lymph nodes where it begins to incubate. The infection will spread quickly through the lymphatic tissue and infect all the lymphoid organs within five days. By day nine, the virus will have reached the blood system. It then reaches the lining of the respiratory, gastrointestinal, urogenital, and central nervous systems where it begins to cause damage. Approximately 50% mortality rate in most dogs, which is caused by neurological complications.

Early symptoms - (14 days after incubation starts) Canine Distemper includes a cough that will last 1-2 weeks then loss of appetite, and fever (temperature over 102°F). Eye and or nose discharge, depression, and mild eye inflammation that only last a day or two.

Secondary stage - Dogs will experience gastrointestinal and respiratory symptoms such as:

- Fever
- Diarrhea
- Discharge from the eyes
- Pneumonia
- Labored breathing
- Rhinitis
- Vomiting
- Hard Pad

Later Stages:

- Secondary bacterial infections
- Encephalomyelitis (inflammation of the brain and spinal cord)
- Depression
- Muscle incoordination
- Increased sensitivity to sensory stimuli, such as pain or touch.
- Muscle twitching or spasm, which can become disabling.
- Progressive deterioration of motor skills.
- Progressive deterioration of mental abilities.
- Partial or complete paralysis.
- Seizures (often times referred to as "chewing gum fit" where the dog appears to be chewing gum)

AFTER EFFECTS OF CDV

Weakened Digestive System:

If the animal is left with a weakened digestive system, residual diarrhea or chest complications, use the following protocol:

- Amber Technology® Parvaide™ - Administer 3 times daily.
- Fresh Grated Raw Garlic - Administer 2 times daily.

Small dogs or puppies - 1/2 small garlic clove.
Medium dogs - 1/2 large garlic clove.
Large dogs - 1 large garlic clove.

Add grated garlic to food or mix with honey and flour, roll into 2 small balls and administer once in the morning and again in the evening.

Chorea: Chorea is a condition in which some muscles in the body (usually a leg, hip, or shoulder) twitches every few seconds, sometimes even during sleep. It results from damage which occurred to the spinal cord or brain during CDV. Most pets with chorea are put to sleep because it is not considered curable; however, once in a rare while a spontaneous recovery occurs. Alternative therapy may be worth a try, as it may improve the odds. Amber Technology's Derma NERV may also help when nerves have been affected.

OAT WATER RECIPE

Can be used in place of Pedialyte®.

1/2 Gallon of Water.
1 cup of Oats (Quaker Oats® are OK)
1/3 cup of Molasses
1 tsp. of Salt

Bring the water to a boil. Add oats, salt and molasses. Let sit for 20 minutes, then strain off the oats.

| Weight | Dosage | Weight | Dosage |
|-------------|--------|-----------|--------|
| Under 3 lbs | 1 tsp | 21-30 lbs | 2 Tbsp |
| 4-10 lbs | 2 tsp | 31-40 lbs | 3 Tbsp |
| 11-20 lbs | 1 Tbsp | 41-50 lbs | 4 Tbsp |

Add an additional 1 Tablespoon for each 10 lbs of body weight over 50 lbs.

AMBER TECHNOLOGY® PROTOCOL

Due to the complexity of the virus, not any one product can make your pet recover. This is a harsh virus and a lot of dedication will be needed. Do not feed your dog during the fever stage. However, keep dogs hydrated with Colostrum, Pedialyte® or Oat Water.

We highly suggest the following products if your dog has CDV (Canine Distemper Virus) or has been exposed to CDV.

- **Canine Distempaid™** - Administer 2 times daily to support neurological symptoms of tremors, hard pad, and seizures.
- **Derma NERV™** - Administer 3 times daily as an important part of recovery due to the fact that the virus attacks the nervous system.
- **Vibactra Plus™** - Administer 3 times daily as an all-natural antibiotic for viral, bacterial and microscopic parasitical infections. If running a fever, administer 4 times a day.
- **Life Cell Support™** - Administer 4 times daily for antioxidants which are very important for an illness.
- ***Colostrum, Pedialyte® or Oat Water** - Administer every 4 hours. This is helpful in keeping blood sugars up. See Oat Water Recipe in pamphlet.
- **Vitamin C (1000 mg)** - Divide into 4 times throughout the day when feeding and when fever is not present.
- **Lysine (25 to 200 mg)** - Administer 1 time daily to help support the nervous system.
- **Natural B Complex (10 to 50 mg)** - Administer 1 time daily for protein.

Additional Products That May Be Helpful

- **Adizone™** - Administer 2-3 times daily for inflammation
- **MSM** - (found at local pharmacies) may be given in place of Adizone™ every 12 hours for inflammation.
- **Coconut Milk** - Administer 4 - 6 times daily for viral infections. (if Amber Technology's® Vibactra Plus™ is not available). (Refer to liquid chart on back side of brochure)
- **Pet's Cough & Cold Formula™** - Administer 4 times daily for coughing.
- **Vitamin A (200mg)** - Administer 1 time daily to help build the immune system.

*Colostrum - Will be more beneficial if one can obtain Colostrum with immunities from a dog that has had vaccinations or has recovered from CDV.
