## FELINE DISTEMPER EMERGENCY TEA RECIPE

If you have ordered Kitty-DT (formerly Kitty Distempaid), Vibactra Plus, and/or the other natural remedies your kitten may need to overcome and/or prevent feline distemper from us Monday through Friday by 3pm PST via overnight express delivery inside the U.S., expect delivery the following day (excluding holidays). U.S. orders received after 3 pm PST, may not ship until the following business day, so may take 2 business days to receive. If you ordered on a Friday after 3pm PST through Sunday, your order will ship Monday and U.S. overnight delivery should be received on Tuesday. If you ordered priority mail, it can take 2 to 5 business days to receive it, if dealing with an active case of feline distemper, please consider the overnight shipping option. Also, before ordering check to see if we have a retailer near you. Check here for a list of [retailers](#).

It is highly recommended that instead of a traditional antibiotic that [Vibactra Plus](#) is used along with Kitty-DT (formerly Kitty Distempaid). Traditional antibiotics only kill some bacteria and are not nearly as quick acting and effective as Vibactra Plus. Vibactra Plus is a natural organic combination of herbs demonstrated to enhance pet immunity via their known antibiotic and antioxidant activities. Vibactra Plus is a natural herbal antibiotic that was created specifically for use with Paxxin (formerly Parvaid) or the Kitty-DT (formerly Kitty Distempaid). Vibactra Plus is designed to work on viral and bacterial infections, so it will help eliminate the distemper virus, plus prevent secondary infections. Vibactra Plus, a natural herbal antibiotic and antiparasitic alternative will attack viruses, bacteria, and microscopic parasites.

Take a look at my [Healing Feline Distemper Webpage](#) or my [Heal Kitten Distemper page](#), I have not finished these pages, but there is some good information that might be useful to you and your cat or kitten.

### Here is the Feline Distemper Emergency Tea Recipe:

(Please note: This recipe may help sustain your feline distemper kitten until you can get the Kitty-DT and Vibactra Plus, but it is NOT the full strength Kitty-DT).

**Warning:** Do not use this recipe with other treatments where the ingredients are unknown. Doing so could be fatal to your cat. Always check with a qualified or knowledgeable person before combining treatments.

You will need these ingredients (these ingredients can be found in most major supermarkets with pharmacies):

- 1 cup Pedialyte (or electrolyte fluid)
- 2 tea bags herbal Peppermint with Spearmint tea ( We recommend Bigelow's Mint Medley but if you can't find Bigelow look for one that has both peppermint and spearmint) DO NOT GET TEA WHICH CONTAINS CAFFEINE.
- 2 teabags of chamomile tea / DO NOT GET TEA WHICH CONTAINS CAFFEINE
- 2 capsules Echinacea (This can usually be found at Wal-Mart or your pharmacy if it carries a line of natural products)
- 2 Teaspoons Finely chopped garlic [\\*See note below](#)  
(A few things you may want to pick up at the supermarket or have on hand are: Beef Broth or Chicken Broth, syringes, a child size disposable enema )

Heat 1 cup of Pedialyte until hot but do not boil. Add 2 tea bags of mint tea, 2 tea bags of chamomile tea, empty 2 capsules of Echinacea, and add 2 Tsp. of fresh garlic. ([\\*See note below](#)) Do not microwave the tea.

Stir, put a lid on it and let steep for 20 min.

As per the following table give one dose, wait 15 minutes then give another dose, then give a dose every hour

after that.

Animal Weight	Emergency Tea
under 1 lbs.	1/2 tsp
1 to 2 lbs.	2/3 teaspoon
3 lbs.	1 teaspoon
4 to 10 lbs.	2 teaspoons
11 to 20 lbs.	1 tablespoon
21 to 30 lbs.	2 tablespoons

(We recommend you put your cat on an anti-biotic to prevent secondary infections such as pneumonia. We recommend [Vibactra Plus](#) or [Colloidal Silver](#) both kill viruses, bacteria, and fungus across the board, plus single celled organisms such as coccidia protozoan. We only use natural antibiotics as they are far more effective against a wider range of pathogens than what traditional antibiotics cover and in some cases, the natural antibiotic can make the difference of whether a kitten survives.

If your cat is vomiting and will not keep the tea down you can give some Pepto-Bismol, wait 15 minutes, then try the tea again. If that does not work your cat may be too dehydrated, so give an enema with the same amount of tea you are giving for an oral dose. Every single feline distemper kitten I have ever treated has gotten at least one enema. More enema information is on my healing feline distemper webpage above.

Watch for dehydration. If the gums go light pink, gray, or white you need to get fluids into your cat as soon as possible. Pinch the skin, it should go "Instantly" back into place like it does when you pinch the skin on your own arm, if it doesn't your cat is dehydrated. You can take your cat to a vet and get intravenous fluids or you can do an enema. The large intestine will act the same as the small and will absorb fluids. So doing an enema is another way of putting fluids back into the body. Empty the contents out of the infant disposable enema (or use a syringe) and put the suggested amount of tea into it. Use as much of the tea recipe as you give by mouth. For example: if you are giving 1 teaspoon by mouth then give 1 teaspoon by enema. Do not stop giving the tea by mouth. You will give the enema and the tea by mouth every hour until the cat has kept the tea down by mouth at least 2 times (give the enema first then give the tea by mouth) AND until the kitten's gums are a nice dark pink and when you pinch their skin it goes INSTANTLY back into place like it does when you pinch the skin on your own arm.

More feline distemper kittens DIE of dehydration than they do of the feline distemper virus itself, so it is of UTMOST importance to make sure your kitten is properly hydrated. If it takes 1 or 2 seconds for their skin to go back into place when you pinch it, they ARE dehydrated!! IF this occurs, you MUST give the kitten enemas and oral doses EVERY hour on the hour, until their gums are a nice dark pink and you pinch their skin and it goes INSTANTLY back into place. THEN and ONLY then, you can give just the hourly oral doses.

**CAUTION: Do NOT force oral fluid down the throat, as aspiration can occur, putting fluid into the lungs. Do NOT forcefully administer enemas - enemas need to be given slowly to increase chances of rehydrating puppies. Discontinue use if signs of allergies, hives, worsening of symptoms or intolerance to the distemper emergency tea recipe are noted.**

We have found [100% New Zealand Colostrum](#) is excellent to provide some protein as well as boost the immune system of our worst case scenario kittens we have worked with. Kittens who aren't keeping oral fluids down can tolerate just having the dry powder put in their mouths every hour. Those who are keeping fluids down well, can often tolerate the NZ Colostrum wetted just enough to make it easy to syringe down their throats.

If your kitten is whining, give charcoal capsules or [Bentonite Clay](#) every 2 hours for a total of 8 hours or until improvement is seen (which occurs first). Whining is a sign of campylobacter poisoning, NOT feline distemper. Keep up the hourly tea dosing (or Kitty-DT when it arrives) to keep campy kittens hydrated, along with dosing 4x/day with the Vibactra Plus.

**Recommendations for kittens who were vaccinated or chemically wormed within 14 days of coming down with feline distemper:**

- ADD: 1000 mg. vitamin C to the tea recipe for ALL kittens. **Note:** Add the Vitamin C, AFTER the tea has steeped for 20 minutes, as high heat destroys vitamin C.
- ADD: 1/2 teaspoon Oregano to the tea recipe for ALL kittens - use until you have an antibiotic, then discontinue use)

Dose the tea recipe hourly to the sick kitten, until the Kitty-DT arrives, and/or until she starts eating on her own. Use just the peppermint/spearmint, chamomile, vitamin C and pedialyte tea (omitting the garlic and echinacea) with the Kitty-DT when it arrives, INSTEAD of just the plain pedialyte.

Dose the kittens without feline distemper symptoms, 4x/day with the tea recipe. When the Kitty-DT arrives, dose them with just the oral drops of Kitty-DT, combined with the tea recipe fluid 4x/day for 5 days as a preventative. Give the Vibactra Plus drops ONLY 2x/day as a preventative. Vibactra Plus is a strong natural antibiotic, give only the # of drops recommended based on the kitten's weight.

IF the kitten has excessive worm loads add the following to the original tea recipe:

- 1/4 tsp. cloves
- 1/4 tsp. mustard
- 1 tbsp. raw minced garlic (use in place of the 2 tsps. raw garlic in the tea recipe) **\*See note below**

Instances where a feline distemper kitten is NOT having constant bowel movements, at least 4 or 5 per day, 9 times out of 10 they have excessive worm loads. Keep in mind, just because you don't physically see any worms, they can still be infested. Hookworms and whipworms are microscopic so you won't see them, but they can kill kittens and prevent their recovery from feline distemper. Kittens are born with roundworms AND hookworms, even if their mother had NO worms, ova hatch at birth in kittens. Give this tea for the first 2 hourly doses (orally and/or via enema if needed) and then only 4x/day.

Enema doses can be useful to help elicit a bowel movement in kittens that aren't having bowel movements regularly. Use the tea with the cloves and mustard added (or use food grade diatomaceous earth) instead of plain pedialyte, even after the Kitty-DT has arrived to give enemas or oral doses with for kittens who aren't having bowel movements or those you know are infested with worms.

White specks in the stool/diarrhea is indicative of a parasite infestation. If you see white specks, definitely add the cloves and mustard to the tea recipe, though note even if you don't see white specks it doesn't mean the kitten does not have worms. Some kittens continue to vomit when they have excessive worm loads and can actually vomit a bunch of worms!

Cases where kittens were chemically wormed 2 to 4 weeks prior to coming down with feline distemper and especially in instances where they weren't wormed the second time, often have worm infestations as the hatching worm eggs hatched since the first worming.

If you can obtain **Food Grade Diatomaceous Earth** from a local feed store, you can use it instead of the added herbs (garlic and mustard). (**\*See note below**) It is much easier to get down kittens throats as it doesn't taste nasty like the parasite tea does. It is highly effective and what we personally use to deworm infested feline distemper kittens people bring us. Dose 3x/day with the "food grade" DE as recommended on my website for those dealing with infestations. DE is safe to use via enema as well for kittens who are not having bowel movements. Just mix with their hourly pedialyte and Kitty-DT dose and give via enema.

Please do NOT use a chemical wormer when dealing with a sick feline distemper kitten. The chemical wormer given when they have inflamed intestinal tracts from feline distemper more often than not kills the kitten.

If you just chemically wormed your kitten within 7 days of it getting sick: Use bentonite clay or charcoal to sweep the poison out of the system. These remedies are also excellent for salmonella poisoning, aflatoxin poisoning, campylobacter, etc. You can find these things at a health food store. I prefer liquid bentonite clay, but charcoal will work just as well. Dose is adjusted, based on the weight of the kitten.

My recommended dose for kittens who were just wormed:

Kitten Weight	Liquid Bentonite	Charcoal Capsule wetted with water
up to 10 lbs.	1/2 teaspoon	1/2 capsule
11 to 20 lbs.	1 teaspoon	1 capsule
21 to 30 lbs.	1-1/2 teaspoon	1-1/2 capsules
31 to 40 lbs.	2 teaspoons	2 capsules
41 to 50 lbs.	2-1/2 teaspoons	2-1/2 capsules
51 to 80 lbs.	1 tablespoons	3 capsules

Dose either the Bentonite Clay or the Charcoal Capsules (empty capsule and mix with water and syringe down the throat) every 2 hours for a total of 8 hours. When dosing Bentonite or Charcoal dose this on the opposite half hour away from the hourly tea and Kitty-DT dose, as these natural anti-poisoning products will sweep poisons and toxins out of the body, but they will also remove the good things. Bentonite clay or charcoal can be given via enema as well.

You can also use **Amber Tech's Life Cell Support** 4x/day. Use the Bentonite clay or charcoal, even if you are using Amber Tech's Life Cell Support.

If you have a fresh lemon on hand, you can also add to 20 drops of the fresh squeezed lemon juice to any enema doses given. This helps detox the liver from the chemicals.

Some cases of feline distemper kittens who have been overly chemically wormed and/or vaccinated, or poisoned the liver is nearly destroyed. Autopsies/Necropsies of chemically treated feline distemper kittens have shown some where the liver just turns to mush. Kittens under 3# are particularly susceptible to liver trouble from vaccinations, chemical wormers, or poisons.

If you think your kitten's liver is thrashed, you can do the following to help cleanse and detox the liver and start rebuilding it:

**TOXIC LIVER**

**Milk Thistle** ~ NON-alcoholic tincture (or \*evaporate out the alcohol if you can only get the alcohol variety). This works great in enemas, along with the fresh lemon juice above. If your kitten is keeping down the oral fluids, give orally as well, every hour, in addition to the tea or plain pedialyte & Kitty-DT (\*evaporate out the alcohol in the Kitty-DT too). \*See instructions for evaporating out the alcohol below.

**Turmeric** ~ Excellent antioxidant, anti-inflammatory, anti-microbial, anti-carcinogenic, cardio and gastrointestinal effects and great for the liver. You can find this herb at a health food store.

Kitten Weight	Non-Alcohol Milk Thistle	Fresh Lemon Juice	Turmeric
up to 3 lbs.	4 drops	4 drops	250 mg
4-10 lbs.	10 drops	10 drops	250 mg
11-20 lbs.	15 drops	15 drops	250 mg
21-30 lbs.	20 drops	20 drops	500 mg
31-40 lbs.	25 drops	25 drops	750 mg
41-50 lbs.	30 drops	30 drops	750 mg
51-80 lbs.	30 drops	30 drops	1000 mg

\*Alcohol tinctures are NOT recommended for kittens with chemical toxicity/poisoning. To evaporate out the alcohol, simply add an equal number of drops of hot pedialyte or water to the appropriate number of drops (based on kitten's weight) of alcohol tinctures. Wait 30 seconds and the heat will have evaporated out the alcohol in the tincture. Then administer.

**Internal Gold Detox Kit** ~ Often when the liver is toxic, inflamed, and swollen, the kidneys are suffering as well. Using the Internal Gold Detox Kit will help the kidneys and liver function better as it cleanses the liver, blood, lymphatic system, and kidneys. This product is excellent for all liver ailments and especially great for cancer.

**WORST CASE KITTENS**

Worst case scenario feline distemper "plus" kittens (meaning they are dealing with more than just regular feline distemper) we have encountered - their intestines swell so much, they can literally close shut, meaning no oral fluid can go down orally without vomiting instantly after a single drop (or more) of oral fluid is given AND they are NOT having bowel movements at all. Cases such as this arise, again, from overwhelming toxicity in the body often caused by chemical wormers, vaccines, etc. Often, these kittens have normal temperatures (100.5 to 101.5), their gums are a nice pink, and their skin goes instantly back into place meaning they are properly hydrated. Kittens that are treated at the vet hospital on IV's die, but we have found the following to work well with noticeable improvement(having bowel movements again and keeping oral fluids down) within 24 hours of dosing along with hourly dosing of Kitty-DT (evaporate out alcohol) (via enema if that's the only way we can keep it in the kitten) and fluid (rotating pedialyte every other hour with aloe vera juice (make sure the aloe you purchase contains NO alcohol - just straight aloe juice).

**MSM (Methylsulfonylmethane)** ~ is an excellent natural anti-inflammatory that will help reduce swelling quickly. You can also find it at a health food store, Walmart, pharmacies, etc. When dosing kittens with inflamed intestinal tracts, you double the initial dose for the first two weeks (though you won't need to give it for 2 weeks). Expect the kitten to appear more relaxed and comfortable within an hour of dosing.

**Turmeric** ~ Excellent antioxidant, anti-inflammatory, anti-microbial, anti-carcinogenic, cardio and gastrointestinal effects and great for the liver. You can find this herb at a health food store.

**Vitamin C** ~ Preferably a buffered form, such as Ester C, calcium ascorbate, etc.

You will dose the MSM and Turmeric, if you can obtain both, 1/3rd the daily dose, 3x/day to equal the daily recommended dose. You can give an initial dose of one-half the MSM daily dose, then split the other half of the daily dose into 1/4 for the remaining two doses for the first day. Give this via Enema ONLY.

Kitten Weight	MSM	Turmeric	Vitamin C
up to 20 lbs.	1000 mg/day	250 mg/day	a pinch in each hourly enema
21 to 30 lbs.	1500 mg/day	500 mg/day	125 mg/in each hourly enema
31-60 lbs.	2000 mg/day	750 mg/day	250 mg/in each hourly enema
11-20 lbs.	15 drops/day	15 drops/day	250 mg/in each hourly enema
61-80 lbs.	3000 mg/day	1000 mg/day	500 mg/in each hourly enema

Because these kittens cannot keep down oral fluids, even ONE single drop in many cases, it is necessary to give hourly enema doses AND evaporate out any alcohol in tinctures they are given.

**Pure aloe juice** can either be alternated every hour with regular pedialyte doses or you can use half aloe and half pedialyte for each enema dose, mixed with the above ingredients. Aloe has lots of excellent properties, anti-inflammatory, soothing, healing, and laxative are the reasons we are using it for these severely inflamed kittens.

Use the liver detox remedies (milk thistle & lemon juice) as well in each enema given. Mix well. Expect the turmeric to stain the kitten's fur and or your fingers a nice yellow/orange color.

Give **NZ Colostrum** powder dry, orally, just a pinch to 1 tsp. depending on kitten weight, every hour after giving the kitten's enema dose, until the kitten is able to keep down oral fluid. Then syringe NZ colostrum mixed with pedialyte or aloe, starting out with 3 cc's and working up until the kitten can keep down it's normal hourly dose.

Continue the hourly enemas until the kitten is eating on it's own. Then continue the Kitty-DT (evaporate the alcohol) and pedialyte hourly oral doses for 6 hours AFTER the kitten has been eating and drinking on it's own and keeping it down to prevent a relapse. Then give just the Kitty-DT drops 4x/day for 2 additional days. Continue the NZ Colostrum a few times/day. Give the Vibactra Plus only 2x/day for 2 additional days to hasten

complete recovery.

**HOURLY DOSING:**

Dose the hourly tea recipe and/or Kitty-DT & pedialyte is EVERY hour on the hour, until the kitten is eating and consuming fluids on it's own. This means at 3 am, 4 am, 5 am, etc., as even tho they can be "looking" pretty good at 3 am, if you take a nap until 6 am, they can die of dehydration that quickly. Hopefully you have someone who can help you keep up with the hourly dosing, so you can get a nap if needed.

Instances that might occur where: you dosed a kitten at 10 pm and at 10:15 pm the kitten had a big diarrhea or vomit, I usually clean up the mess first, and then mix up another dose to give them as they just lost a big amount of fluid, so they can dehydrate. So although, it was just dosed at 10pm and a kitten vomited or had diarrhea at 10:15 pm and even tho their next dose isn't due until 11 pm, I will give them their normal dose at 10:20 pm (after I clean up the mess first) - IF the kitten had a big vomit, I'll give them an enema. If they had a big diarrhea, I'll give them an oral dose (unless they haven't been keeping the oral doses down prior, then I'll just give an enema). And then give their next hourly dose at 11:30 pm. The tea helps even if you don't dose right after they have a big bowel movement or vomit, BUT it is best to replace the fluids quickly to prevent them from dehydrating for 30 to 40 minutes until their next scheduled dose is due and keeping them properly hydrated this way can hasten their recovery.

**Recommendations for kittens who have been exposed to the feline distemper virus but are not exhibiting any symptoms and who have NOT recently been vaccinated or chemically wormed:**  
Dose kittens who are not showing signs of feline distemper with the above tea recipe 4x/day for 5 days. When the Kitty-DT arrives, dose with just the oral drops of Kitty-DT, based on the kitten's weight, 4x/day for 5 days and give the Vibactra Plus 2x/day for 5 days as a preventative. This has shown to work extremely well at preventing kittens from coming down with feline distemper if dosed immediately after you know they have been exposed to the feline distemper virus.

If you need assistance, you may call us (951) 674-0921 or Amber Tech toll free at (877) 727-8243. As noted on our [Heal Feline Distemper](#) webpage, we charge \$25.00 per 15 minute consultation whether via e-mail or telephone. Most of the information you need is on our website pages or here, but if you are having difficulty, you are welcome to contact us for assistance. Unfortunately, feline distemper is our specialty and as you know, ALL feline distemper kitten cases are emergencies and there are days, weekends, and holidays I am on the phone with feline distemper, canine distemper or parvo puppy customers nearly ALL day and night. I can no longer give free advice, as this consumes a large portion of my time which prevents me from being able to do other things.

MOST feline distemper Kitten's are easy to heal with just the Kitty-DT & Vibactra Plus. The info I have given here is for the more complicated cases and to give you more thorough information to prevent you from having to contact us and to help your kitten or kittens heal more quickly and prevent losses from the more complicated cases.

You can use ALL of the natural remedies I have mentioned in this e-mail, whether or not your kitten has simple feline distemper or a complicated case and it will NOT hurt the kitten, only benefit them, so IF you aren't sure exactly what is going on, ALL of these natural remedies can be used without harm to your kitten.

**\*Note:** One of the most frequently asked questions we get about Flea Free is about the use of garlic in the product. The internet is full of horror stories about the "toxicity" of garlic to pets. Please visit our ["IS GARLIC SAFE FOR PETS?"](#) webpage for information regarding the safe use of garlic.

IF you need further assistance, you can purchase blocks of telephone or e-mail time below. Please be sure to have the following information ready when you call us. IF you need to contact us, at Wolf Creek Ranch, it is quickest and easiest for us if you can provide the following information. If you have paid for a consultation, please either fax or email the answers to the following questions, before your scheduled consultation time:

1. Age and weight of kitten
2. Worming (and whether you've seen worms in the stool or vomit) and vaccination history
3. Type of food you normally feed your kitten
4. Kitten's current rectal temperature
5. Frequency, consistency, smell, and color of kitten's bowel movements
6. Color of kitten's gums and results of the skin hydration pinch test
7. Frequency, consistency, smell, and color of kitten's vomiting
8. Name, city, state, phone number
9. E-mailed pictures of photos of the kitten's bowel movement if you think there is something there we need to see
10. Your Payment Receipt Number so we can reference your advance payment.

Please note, nearly ALL of the information you need is on our webpage or in the emergency kitty distemper tea recipe. READ this information thoroughly. IF you are still having trouble, contact us. ALL distemper kitties are capable of healing, some just need a little more assistance than others.

In order to schedule immediate consultation time, you will need to pay for it in advance. Click on one of the choices below:

The following 4 consultation time/rates are for calls or e-mails originating during normal business hours, Monday

through Friday, 10am-5pm, excluding holidays. If you need assistance after normal business hours, weekends, or holidays please purchase your block of time in the "After hours/weekend" buttons.

The following 4 consultation time/rates are for calls or e-mails originating during normal business hours, Monday through Friday, 10am-5pm, excluding holidays. If you need assistance after normal business hours, weekends, or holidays please purchase your block of time in the "After hours/weekend" buttons.

- 15 Minute Consult ~ \$25.00 (Mon-Fri 10am-5pm PST Only) [ADD TO CART](#)
- 30 Minute Consult ~ \$50.00 (Mon-Fri 10am-5pm PST Only) [ADD TO CART](#)
- 45 Minute Consult ~ \$75.00 (Mon-Fri 10am-5pm PST Only) [ADD TO CART](#)
- 60 Minute Consult ~ \$90.00 (Mon-Fri 10am-5pm PST Only) [ADD TO CART](#)

If you need assistance after normal business hours or on weekends, please select a block of time below:

- 15 Minute Consult ~ \$40.00 (After hours/weekends only) [ADD TO CART](#)
- 30 Minute Consult ~ \$80.00 (After hours/weekends only) [ADD TO CART](#)
- 45 Minute Consult ~ \$120.00 (After hours/weekends only) [ADD TO CART](#)
- 60 Minute Consult ~ \$140.00 (After hours/weekends only) [ADD TO CART](#)
